Office Action Summary

Application No.

09/454,969

Applicant(s)

FUKUDA, RYOJI

Examiner

Abbas I Abdulsalam

Art Unit

2674

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 July 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,4,7-14,22,23,25,28-34,42,43,45,48-54 and 62-64 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,4,7-14,22-23,25,28-34,42-43,45,48-54 and 62-64 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

Art Unit: 2674

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-2, 4, 7-14, 22-23, 25, 28-34, 42-43, 45, 48-54 and 62-64 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2, 4, 7-14, 22-23, 25, 28-34, 42-43, 45, 48-54 and 62-64 are rejected under 35 U.S.C. 103(a) as being unpatentable over Babb et al. (USPN 5940065) in view Edo et al. (USPN 6133905).

Regarding claims 1, 22 and 42, Babb teaches touch screen system including correcting of coordinates such as (X, Y), and correction coefficients. See column 2, lines 1-9. Bobb discloses uncorrected coordinates input to be linearized by algorithm means before it is ready for lookup table, which operates in linearized space. See column 2, lines 11-14. Babb further teaches that the lookup table provides an addressable storage for correction coefficients, which are used to calculate a location from measured detector values. See column 2, lines 1-2. Babb shows that the coefficients are to be solved using simultaneous equations. See column 4, lines 23-25 and

Art Unit: 2674

column 11, lines 24-29. Babb teaches the range of corrections as being from zero order to polynomial levels and also teaches a mapping function to map the detector outputs to corrected coordinate positions. See column 2, lines 9-10 and column 4, lines 19-23. Furthermore, Babb teaches a method for determining coordinate positions with respect to a second medium having a surface from multiple input values. See column 8, lines 49-67. Babb teaches a programmable read only memory (EEPROM) which may be attached or included with a sensor for string coefficients. See column 10, line 66 and column 11, lines 1-5. Likewise, Babb teaches 2K-bit memory device that is used to store the calculated and applied coefficients. See column 16, lines 50-53.

Babb teaches data acquisition system (200) along with substrate (110) and the process of data transmission. Babb teaches a touch screen system including detectors in terms of accurately determining a coordinate position of a touch. Babb also teaches sensor data coordinates with respect to touch coordinates that are not-linear and the use of least mean square curve for solutions of equations. In addition, Babb teaches a Mathcard software which is used to compute the mapping coefficient and further teaches programming codes, which are used for efficient executions. Babb teaches a method involving reception of an address in the form of X and Y values corresponding to uncorrected coordinates and also teaches a method to produce corrected coordinates. Babb teaches mapping of a sensor in terms of sample (160), touch detected (161), calculation (162), identification (163) and computing X and Y coordinates (164). See column 1, lines 6-14, column 2, lines 1-9, column 4, lines 34-47, column 13, lines 5-10, column 17, lines 48-60, Fig 6 and Fig 7. However, Bobb does not disclose "reference points yet to be designed are

Art Unit: 2674

displayed for designation in a user -determined order". Edo on the other hand teaches an input apparatus including a display unit (31) which causes predetermined number of options to be displayed with respect to predetermined reference points in the displayed region such that the display control unit (36) selects one of the options and when select key (39) is operated by a user, the option is changed according to the order of selection in response to the key operation. See the abstract and Fig. 1&2.

Therefore, it would have been obvious to one having skill in the art at the time the invention was made to modify Babb's touch screen system to adapt Edo's display control unit (36) along with selection mechanism operated by the user. One would have been motivated in view of the suggestion in Edo that selection of options operated by the user as demonstrated in Fig (1-2) equivalently provide the desired reference points in a user-determined order. The use of display control unit along with selection mechanism helps function an input apparatus more effectively as taught by Edo et al.

In addition, Edo defines a "processing candidate option" to mean an option, which corresponds, to the processing operation or data designated by the user for selection and execution by the controller (24) (see col. 8, lines 57-59). Edo further teaches that the reference point of each option is located at the center of the option, and discloses a display control unit (36), which causes the "processing candidate option" to be displayed in different mode when not selected. It would have been obvious that the display control unit (36) provides the desired discriminating means. See col. 8, lines 55-64 and col. 9, lines 6-18.

Art Unit: 2674

Moreover, referring Fig. 6, Edo teaches "arranging position data group" (85), which includes coordinates corresponding to the display state storage (35). Edo also teaches that display state storage (35) includes regions for storing selected processing candidate. See col. 12, lines 24-31. It would have been obvious that the display state storage (35) is functionally equivalent to the desired coordinate keeping means.

Regarding claim 2, Babb teaches that for each set of coordinate values (X, Y), the detector values are used as variables A, B, C, D in the form of equations. See column 13, lines 20-32.

Regarding claims 4, 25 and 45, Babb teaches that the mapping equation which is capable of producing accurate position output. See column 3, lines 1-2, and column 4, lines 1-12.

Regarding claims 8, 29 and 49, Babb teaches solving simultaneous equations, which determines coefficients. See column 11, lines 24-29

Regarding claims 10, 31 and 51, Babb teaches mapping for a set of sensor data coordinates to touch coordinates and also teaches that the mapping relation has inputs greater in number than outputs. See column 4, lines 39-47. Babb teaches distortions of coordinate values in X and Y and in rectangular shape. See Fig 1.

Regarding claim 43, Babb teaches a method of determining coefficients involving solving polynomial equations. See column 7, lines 25-48. Babb also teaches correction coefficients as well as storage for correction coefficients, and the steps of producing corrected coordinates. See column 2, lines 1-18.

Art Unit: 2674

Regarding claims 11, 23, 32 and 52, Babb teaches a method of determining coefficients involving solving of polynomial equations. See column 7, lines 25-48. Babb also teaches correction coefficients as well as storage for correction coefficients, and the steps of producing corrected coordinates. See column 2, lines 1-18.

Regarding claims 12, 33, 53 and 62-64, Edo teaches a display control unit (36) which causes the "processing candidate option" to be displayed in different mode when not selected. Edo teaches that the display control unit also arranges the reference points with respect to X and Y coordinates. See col. 8, lines 55-64 and col. 10, lines 29-37. Coordinates.

Regarding claims 13, 34 and 54, Babb teaches algorithmically compensated pressure and position sensor. See Fig 11.

Regarding claim 14, Babb teaches a mapping system which can be provided as software driver system in a connected host computer. See column 11, lines 6-8

Regarding claims 9, 30 and 50, see Fig 8 (257, 210).

Regarding claims 7, 28 and 48, Edo teaches an option designation operation of the input apparatus (23) where the display control unit (36) selects a " processing candidate option" and a group of options from a plurality of options such that the option number the option selected as well as coordinates of plurality of display positions are stored in the display state storage (35). See col. 13, lines 22-38 and Fig. 7.

Art Unit: 2674

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

4. Any inquiry concerning this communication or earlier communication from the examiner should be directed to **Abbas Abdulsalam** whose telephone number is **(703) 305-8591**. The examiner can normally be reached on Monday through Friday (9:00-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Richard Hjerpe**, can be reached at **(703) 305-4709**.

Any response to this action should be mailed to:

Commissioner of patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314

Hand delivered responses should be brought to Crystal Park II, crystal drive, Arlington, VA, Sixth Floor (Receptionist).

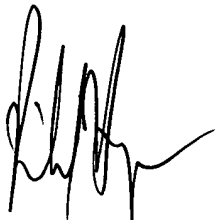

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology center 2600 customer Service office whose telephone number is (703) 306-0377.
